

3D Liver Scaffold Dataset — Requested Visualizations

Dataset: 145 rows × 58 columns

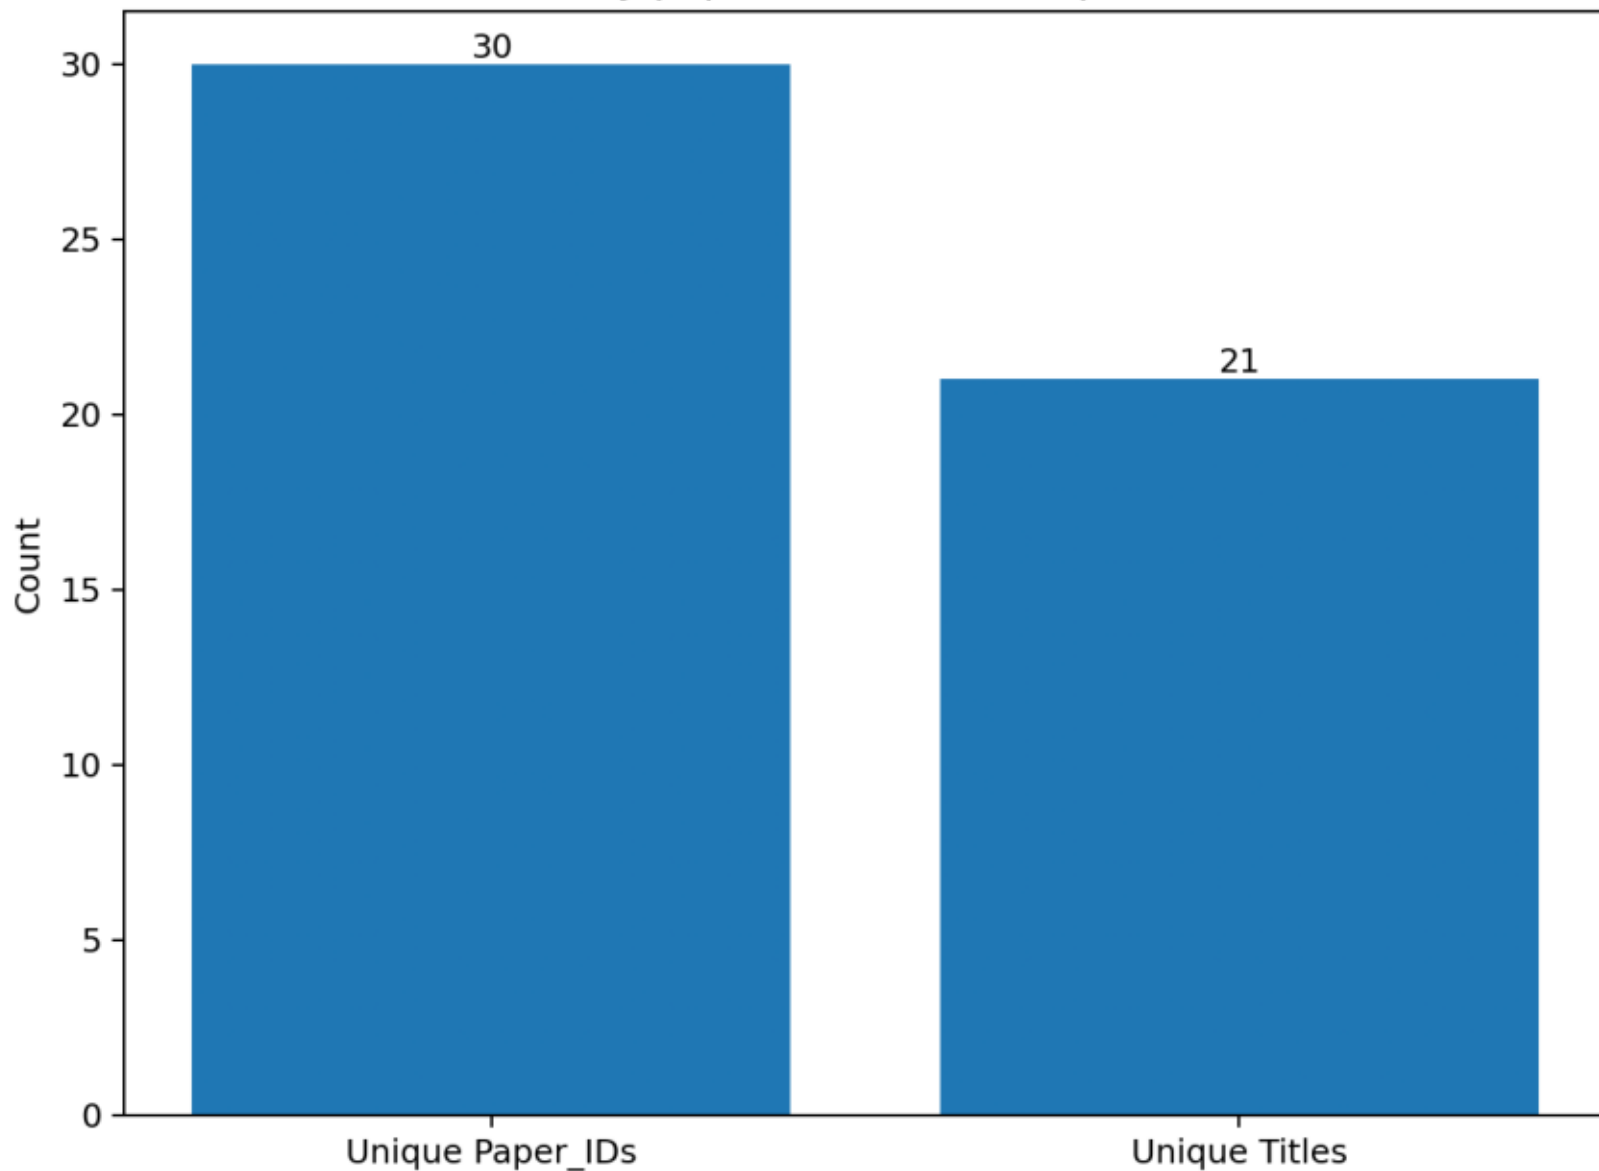

Paper IDs: 30 | Unique titles: 21

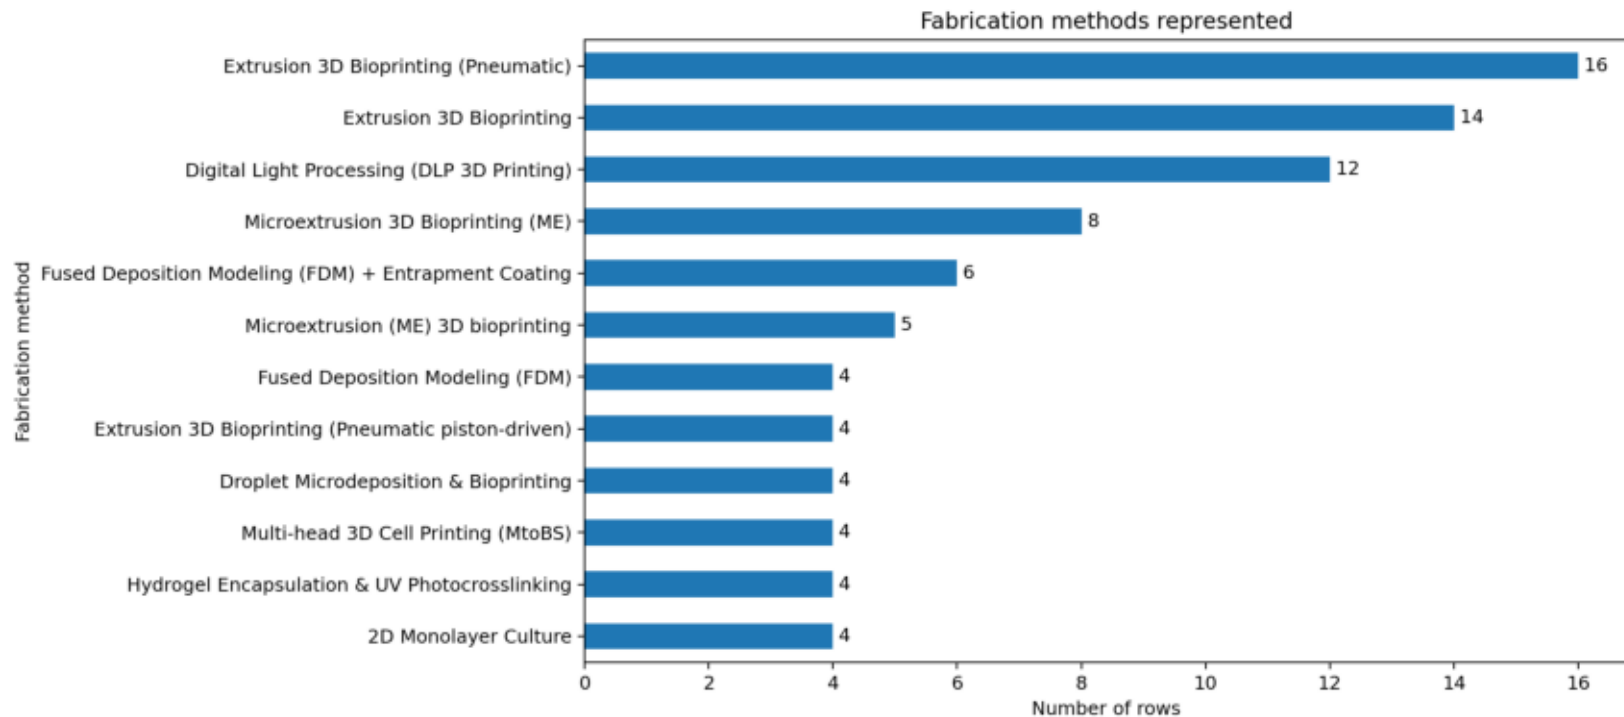

Visualization rule: cells containing 0, NR, or similar non-reported placeholders were treated as missing for numeric/categorical plots.

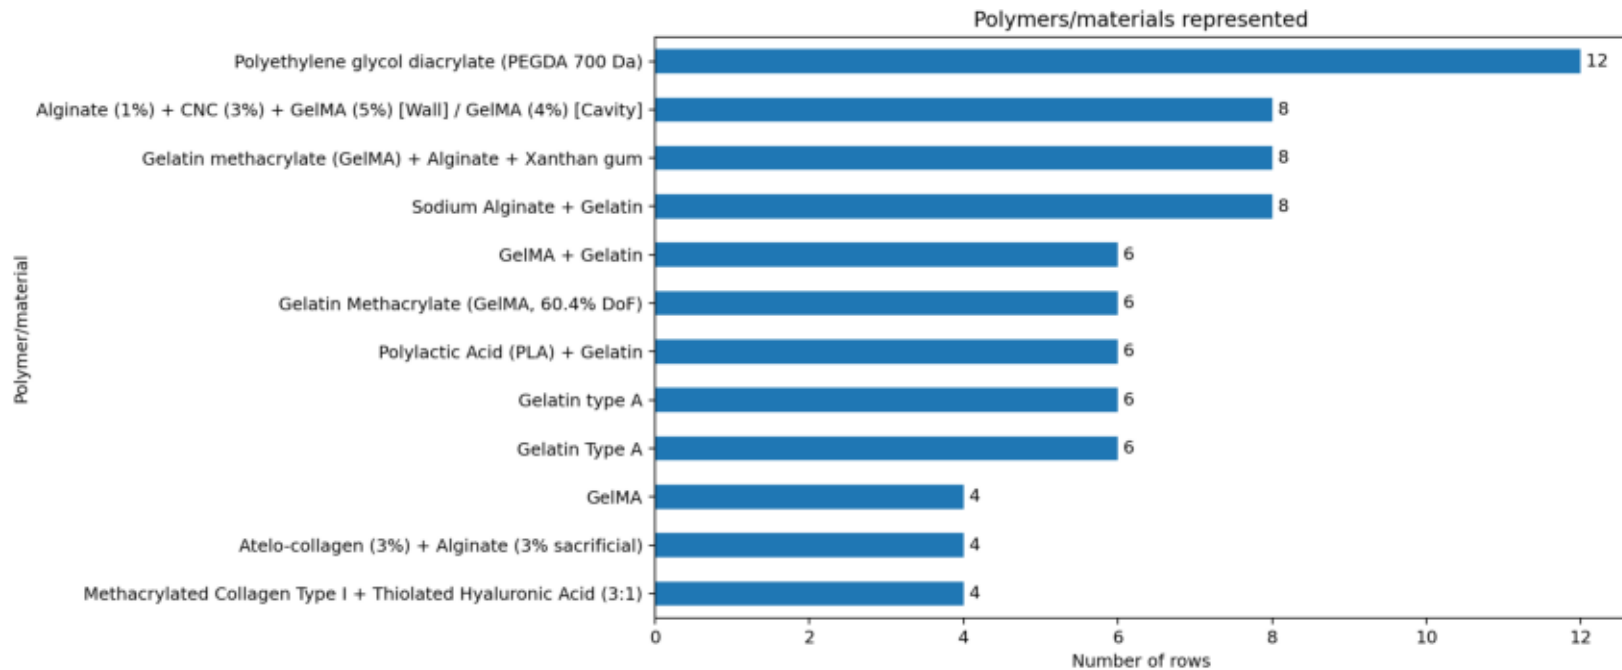

Numeric strings containing ranges or $\pm$ values were reduced to a mean/midpoint for visualization only. Values were not externally corrected or converted.

Important: these plots are exploratory. A scatter/correlation pattern does not establish causation. Before final ML, missing-value coding, units, duplicate/legacy columns, and study-level leakage should be handled explicitly.

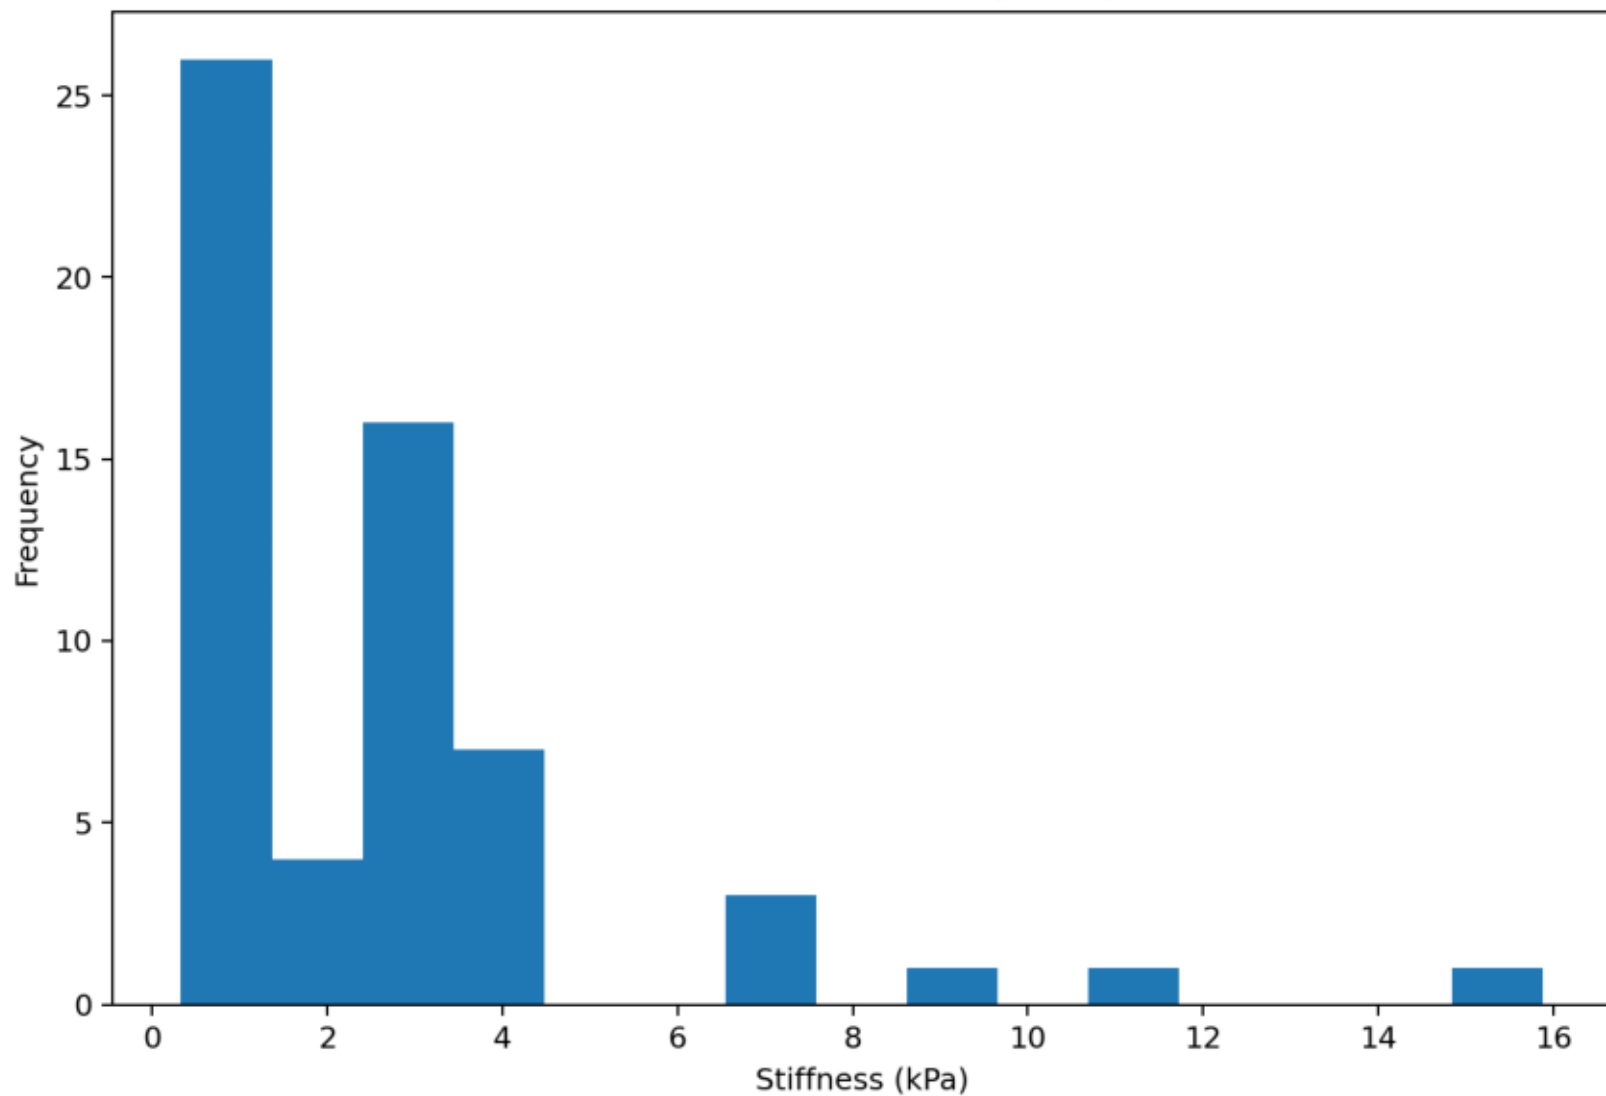

How many papers/studies are represented?

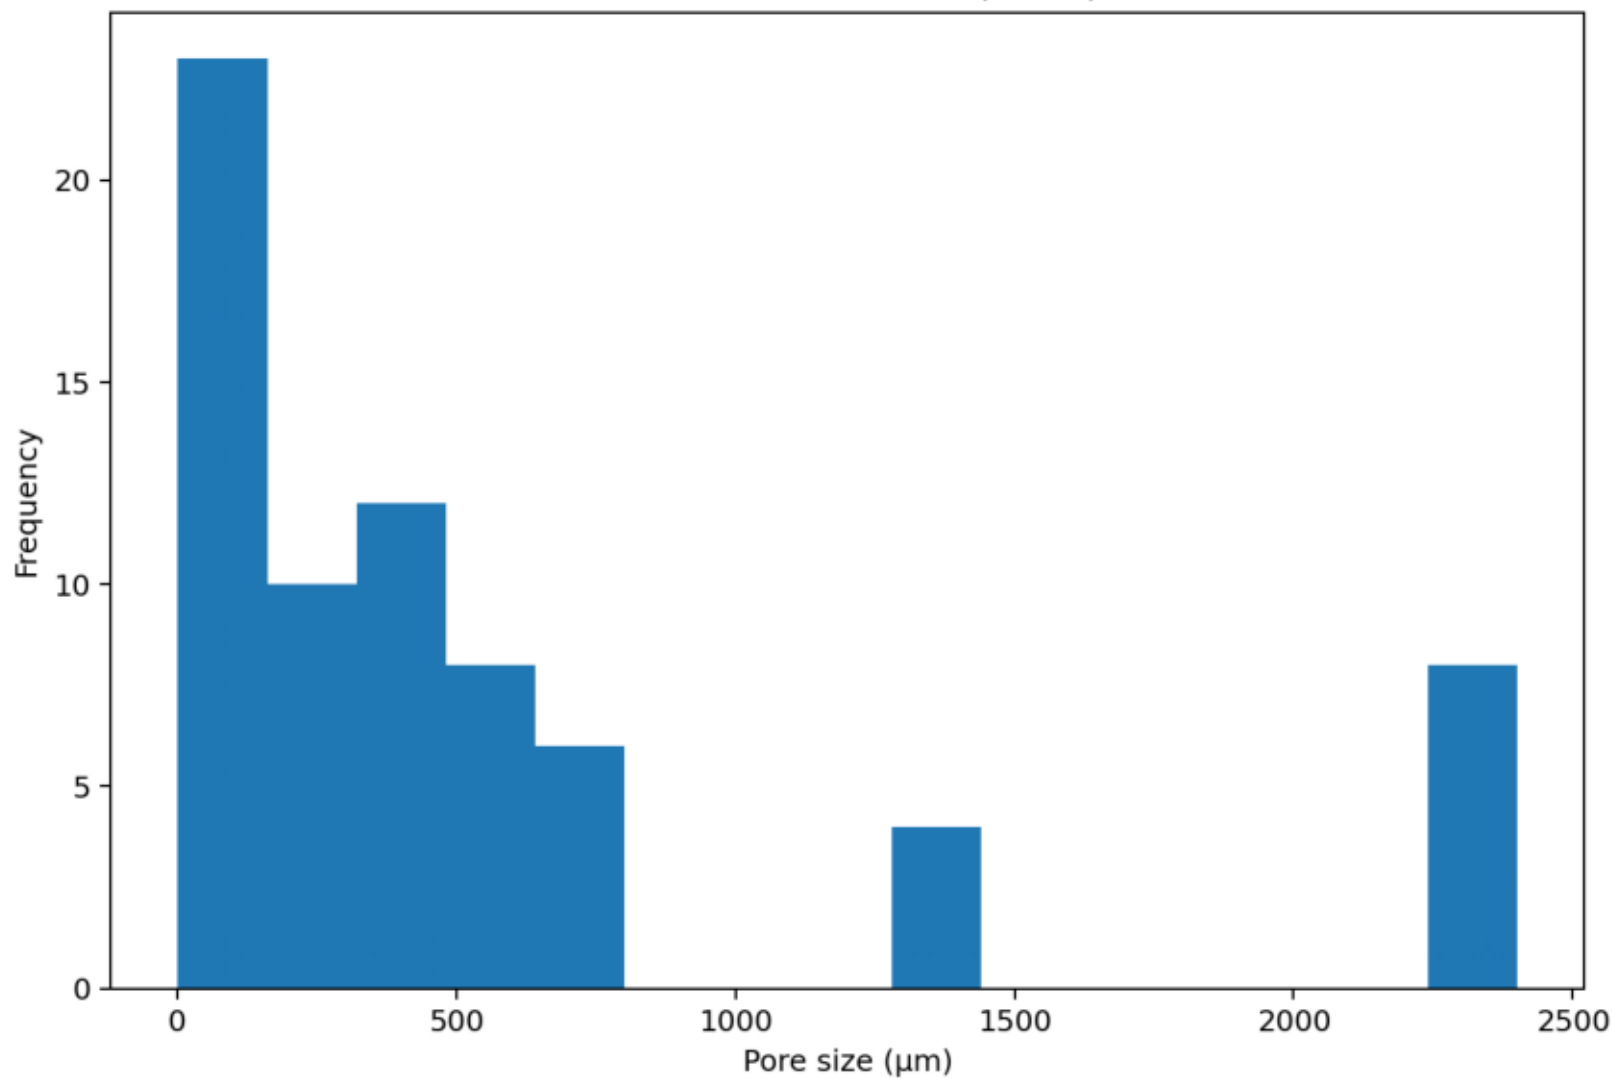

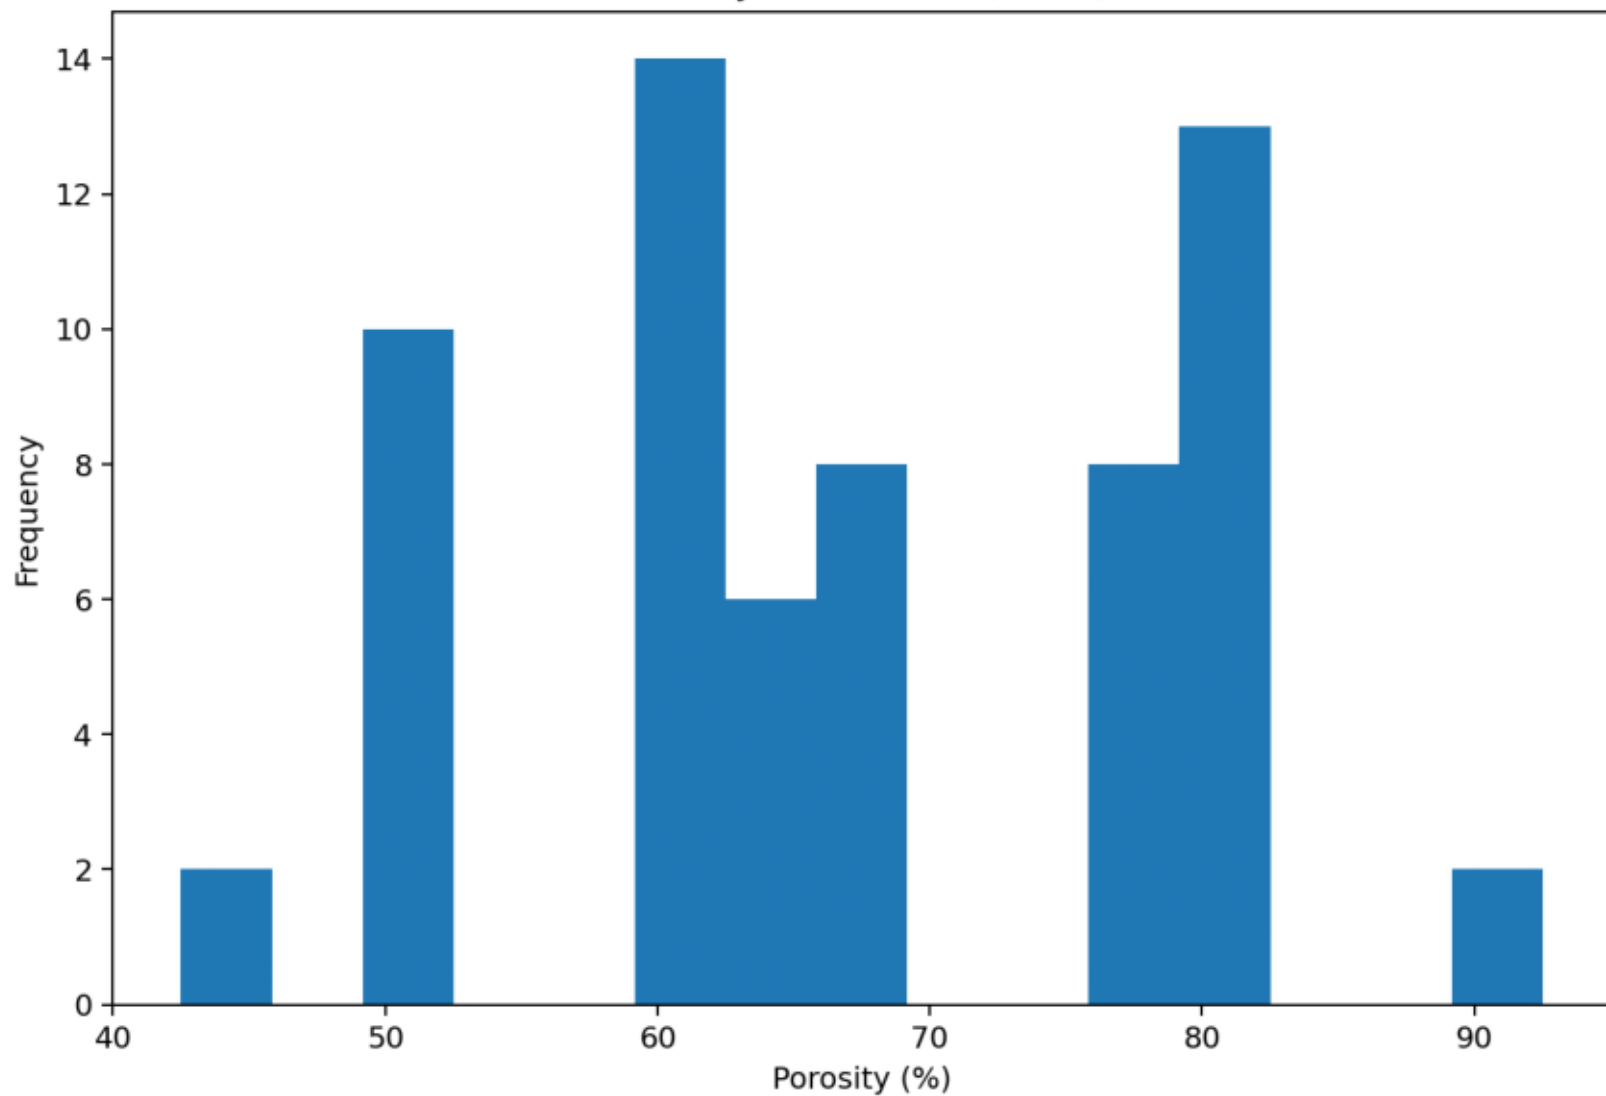

Stiffness distribution (n=59)

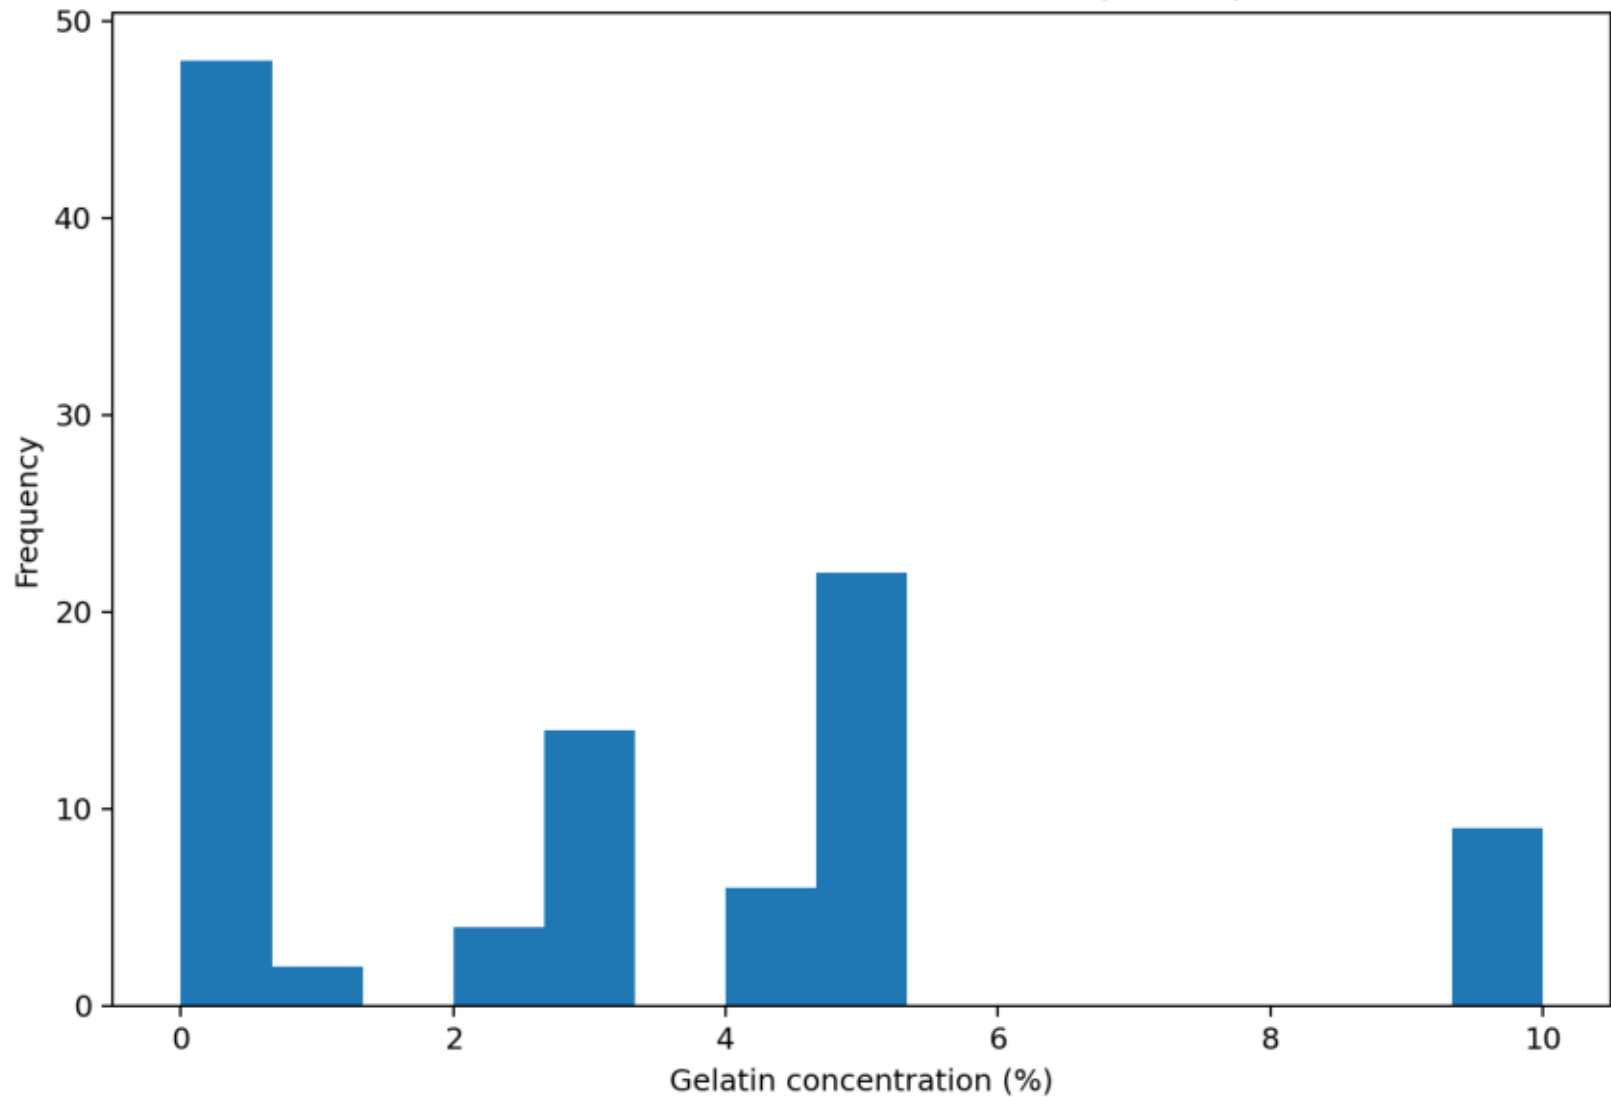

Pore-size distribution (n=71)

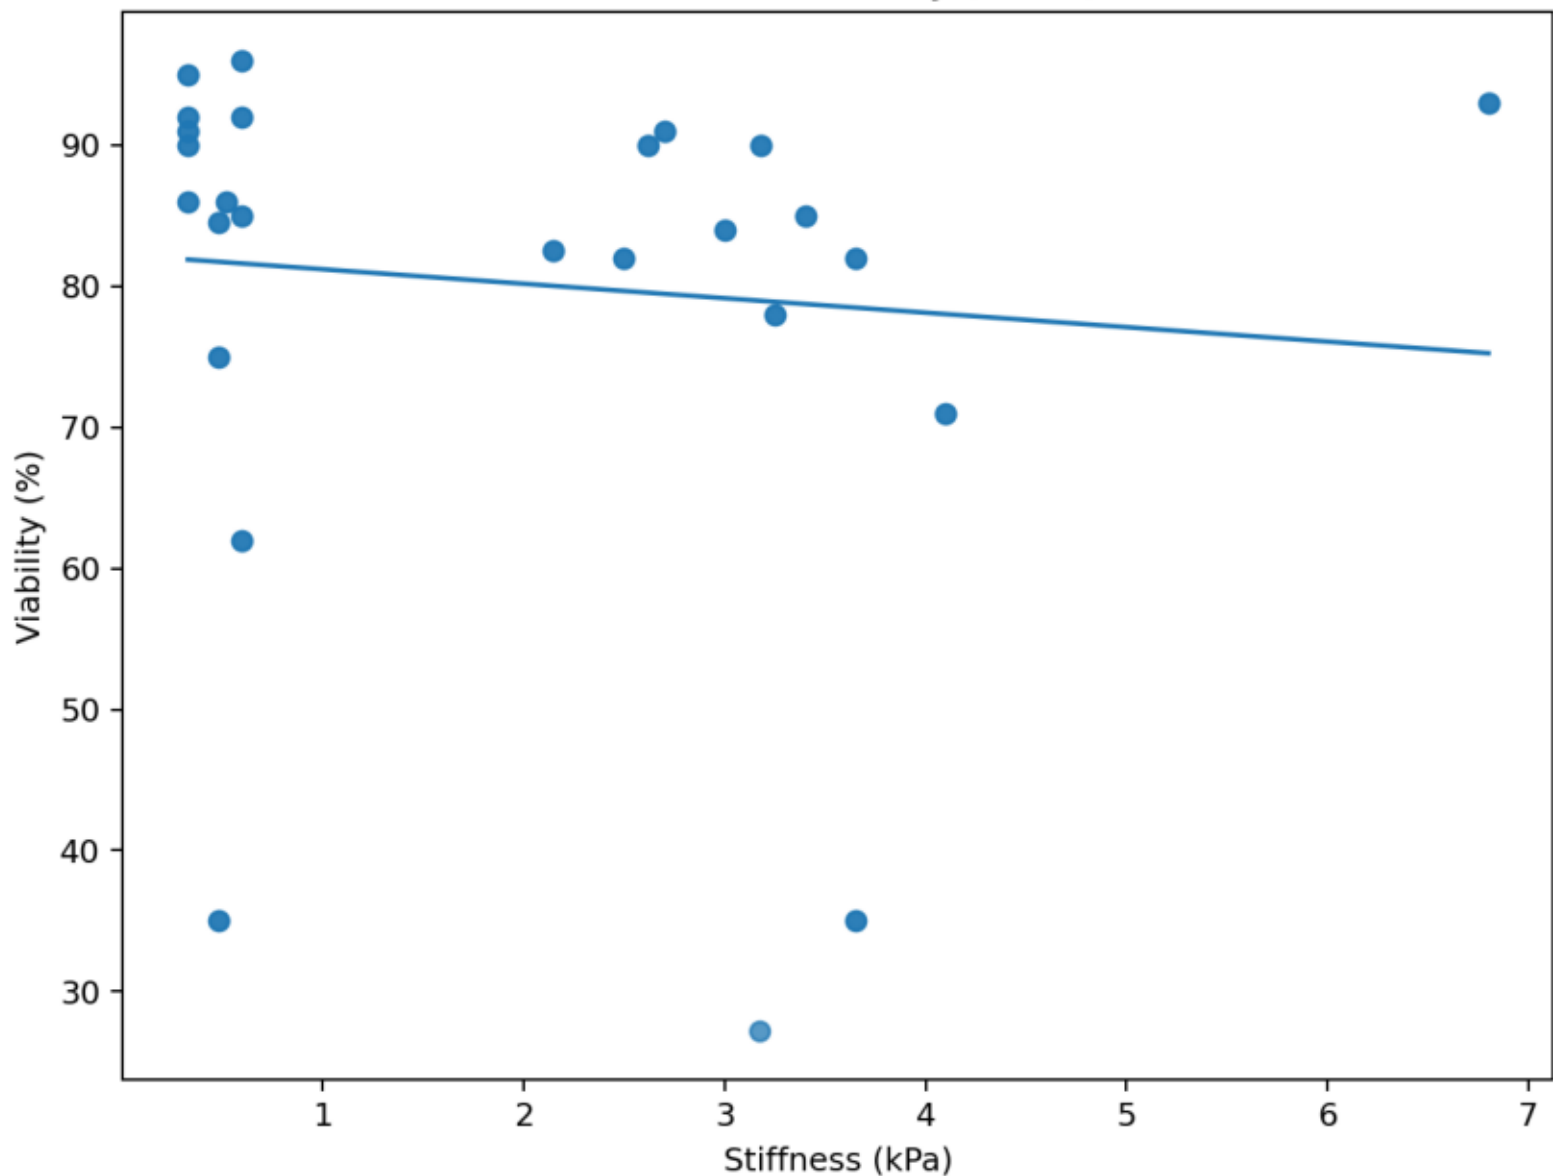

Porosity distribution (n=63)

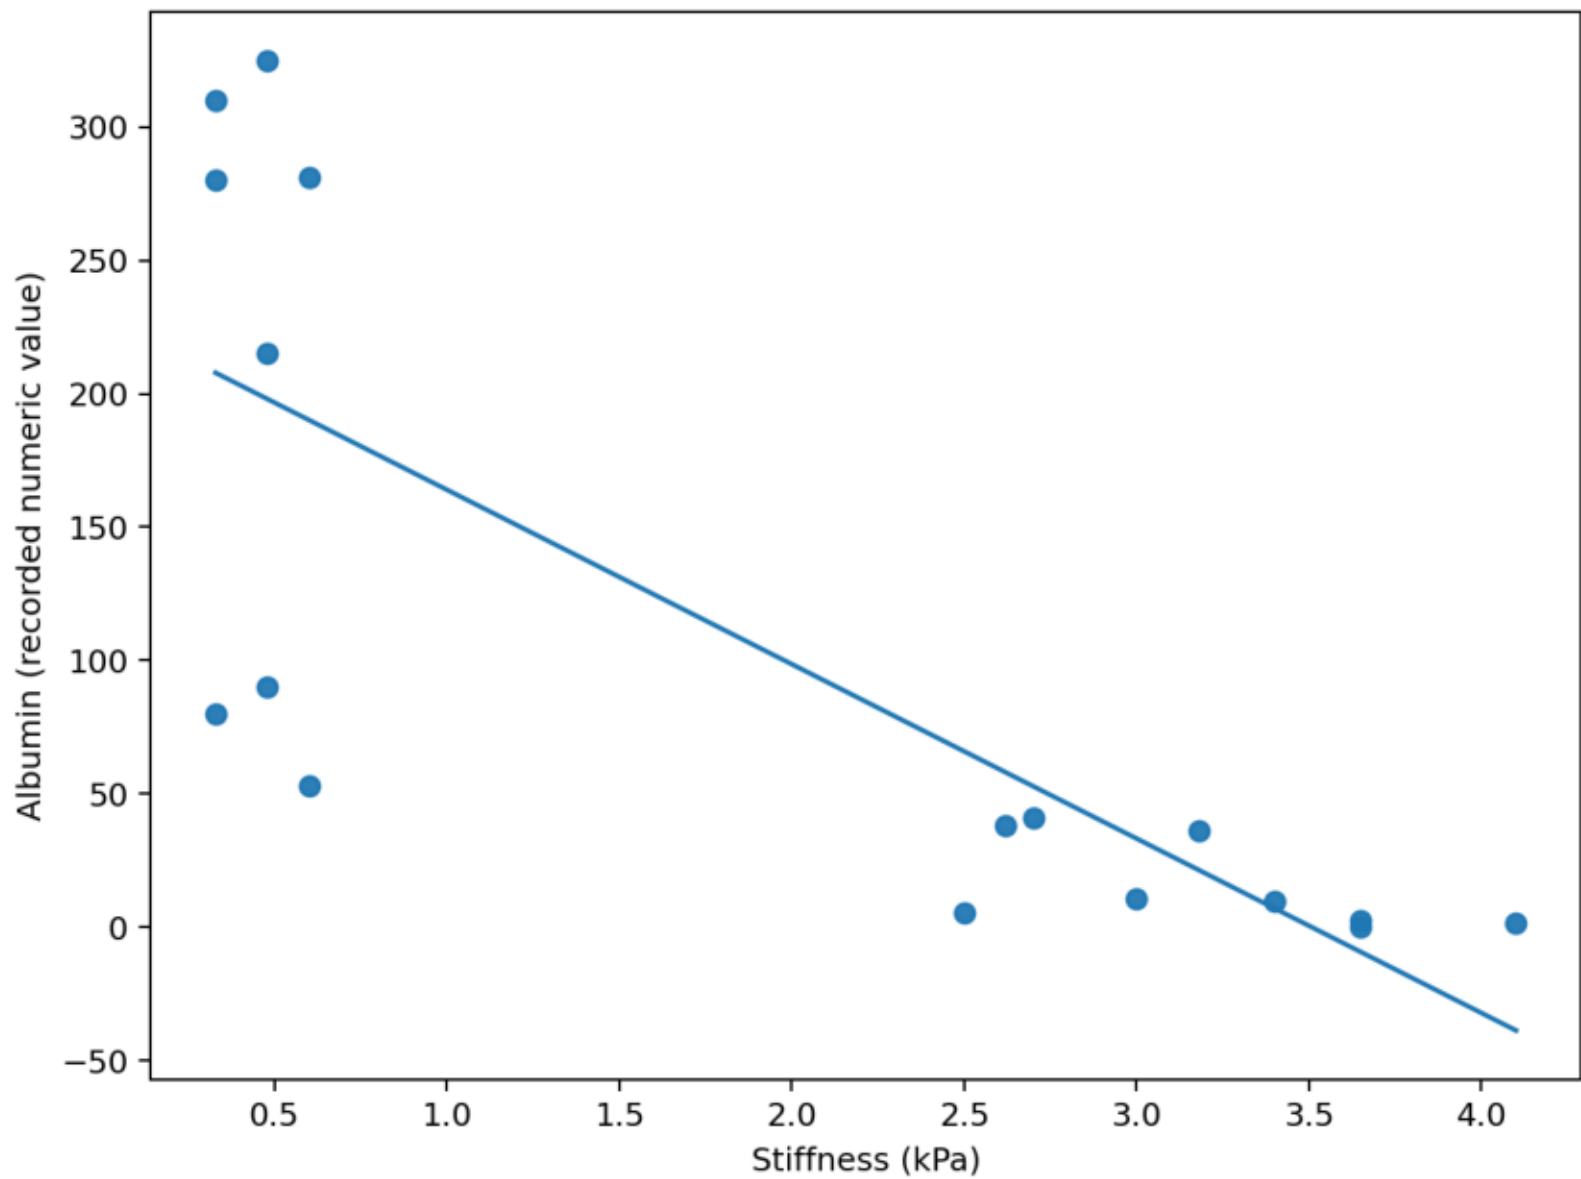

Gelatin concentration distribution (n=105)

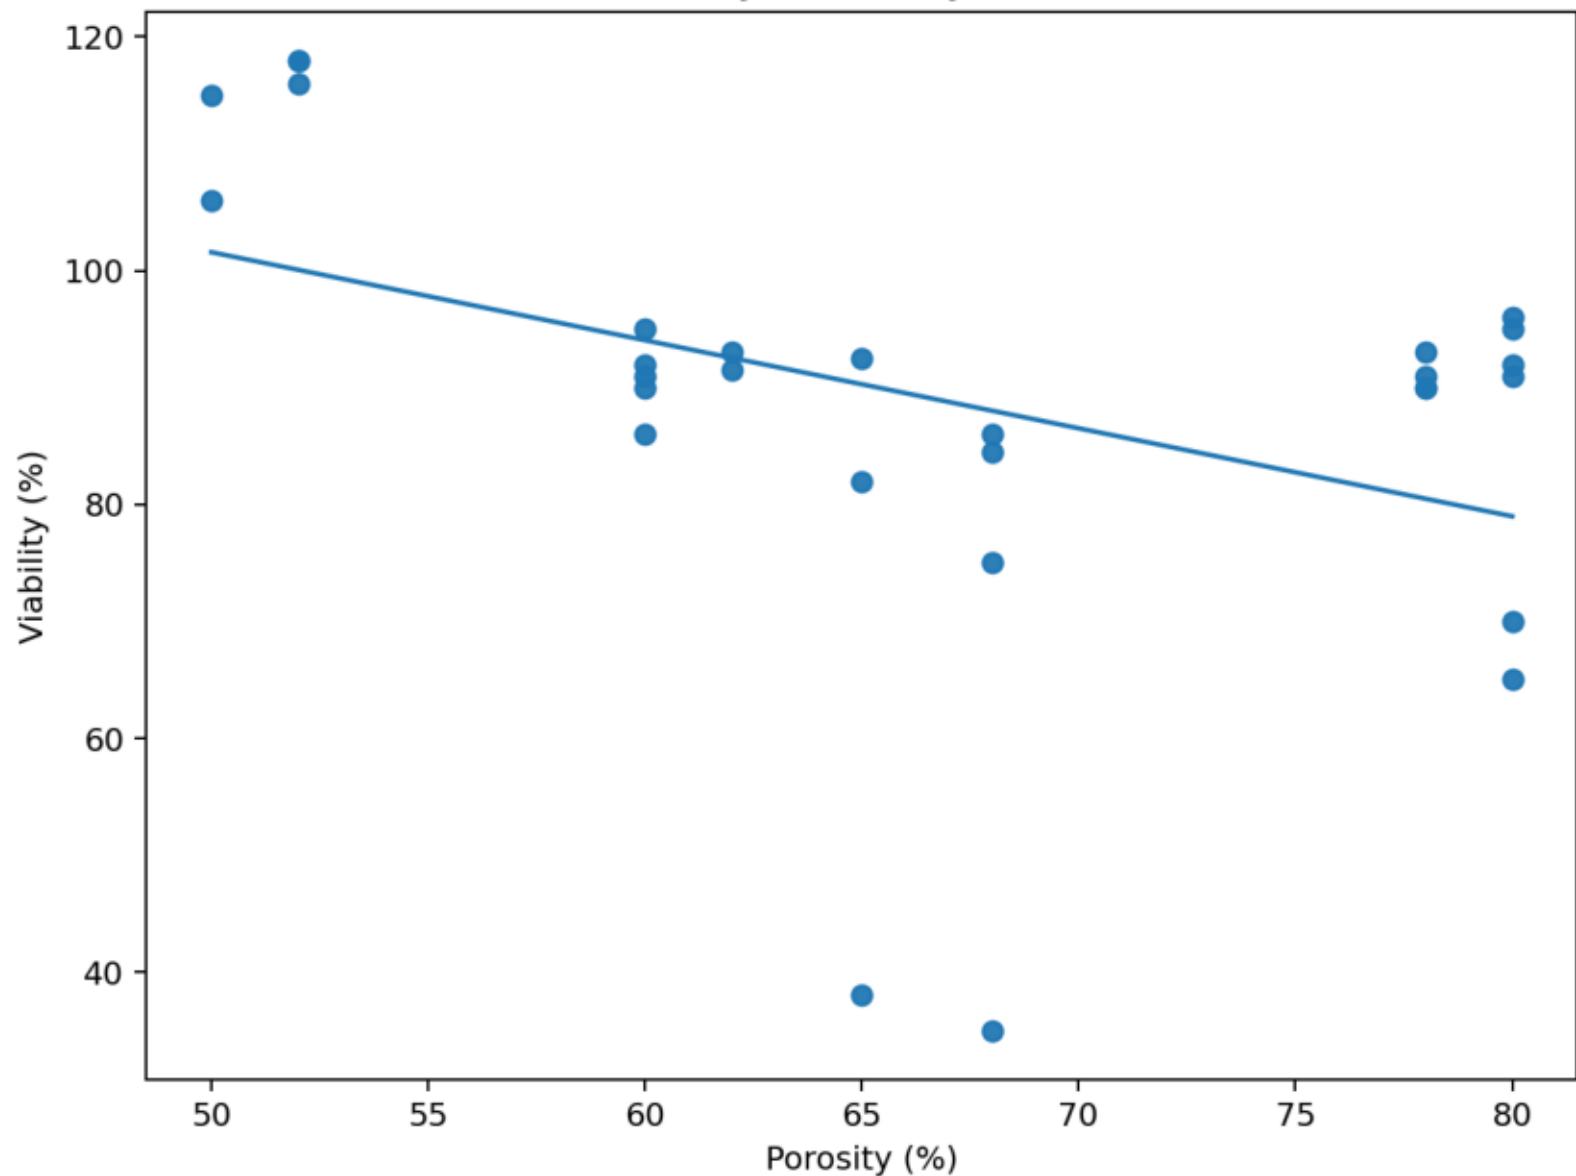

Stiffness → viability (n=51)

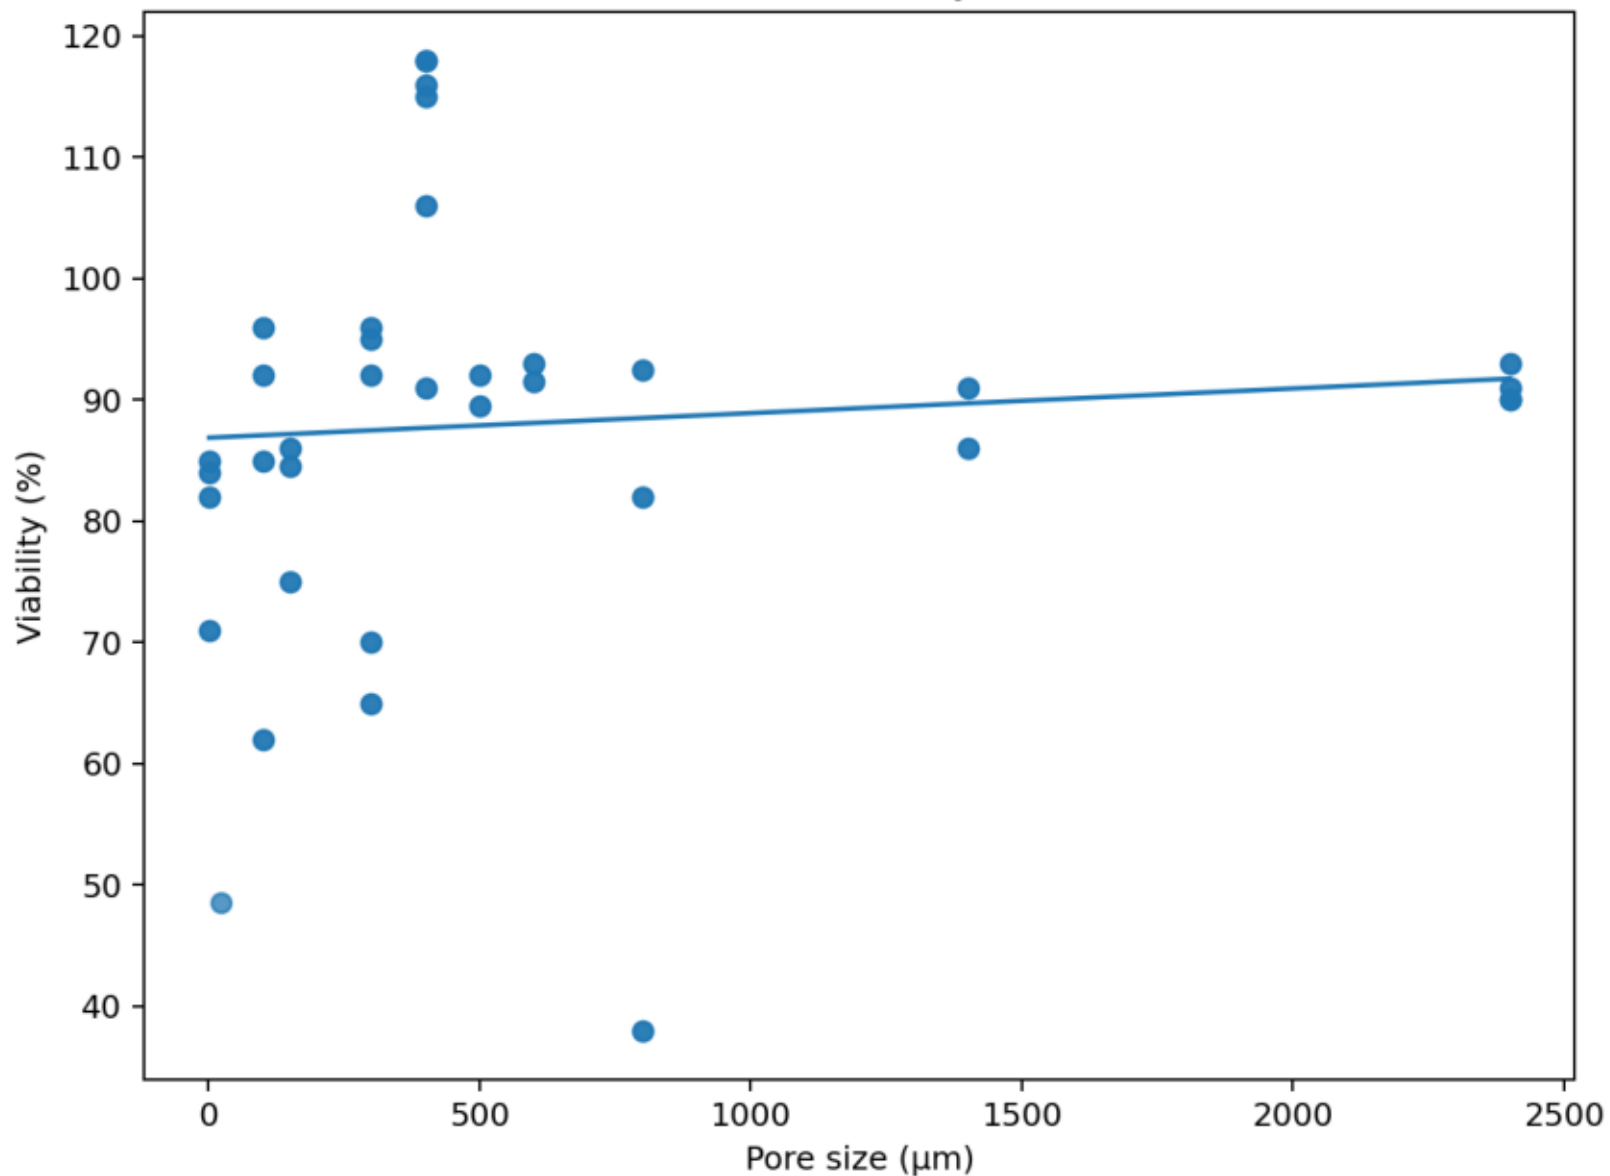

Stiffness → albumin (n=34)

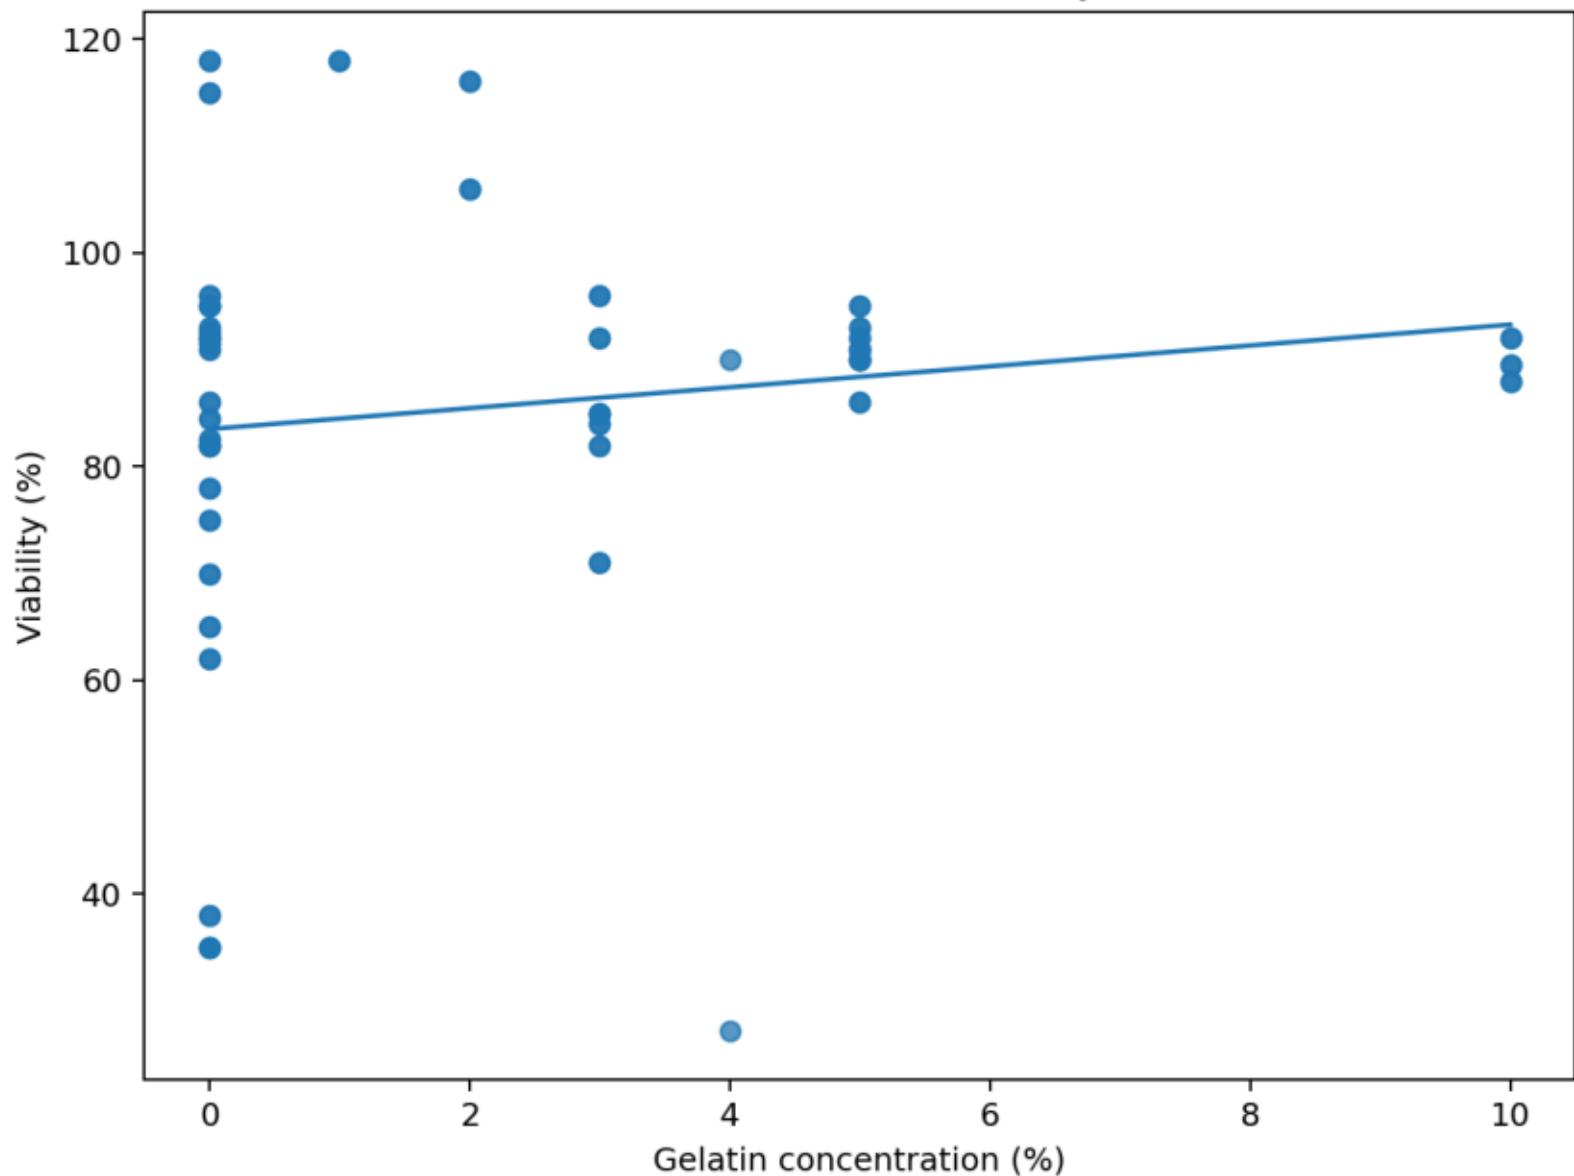

Porosity $\rightarrow$ viability (n=58)

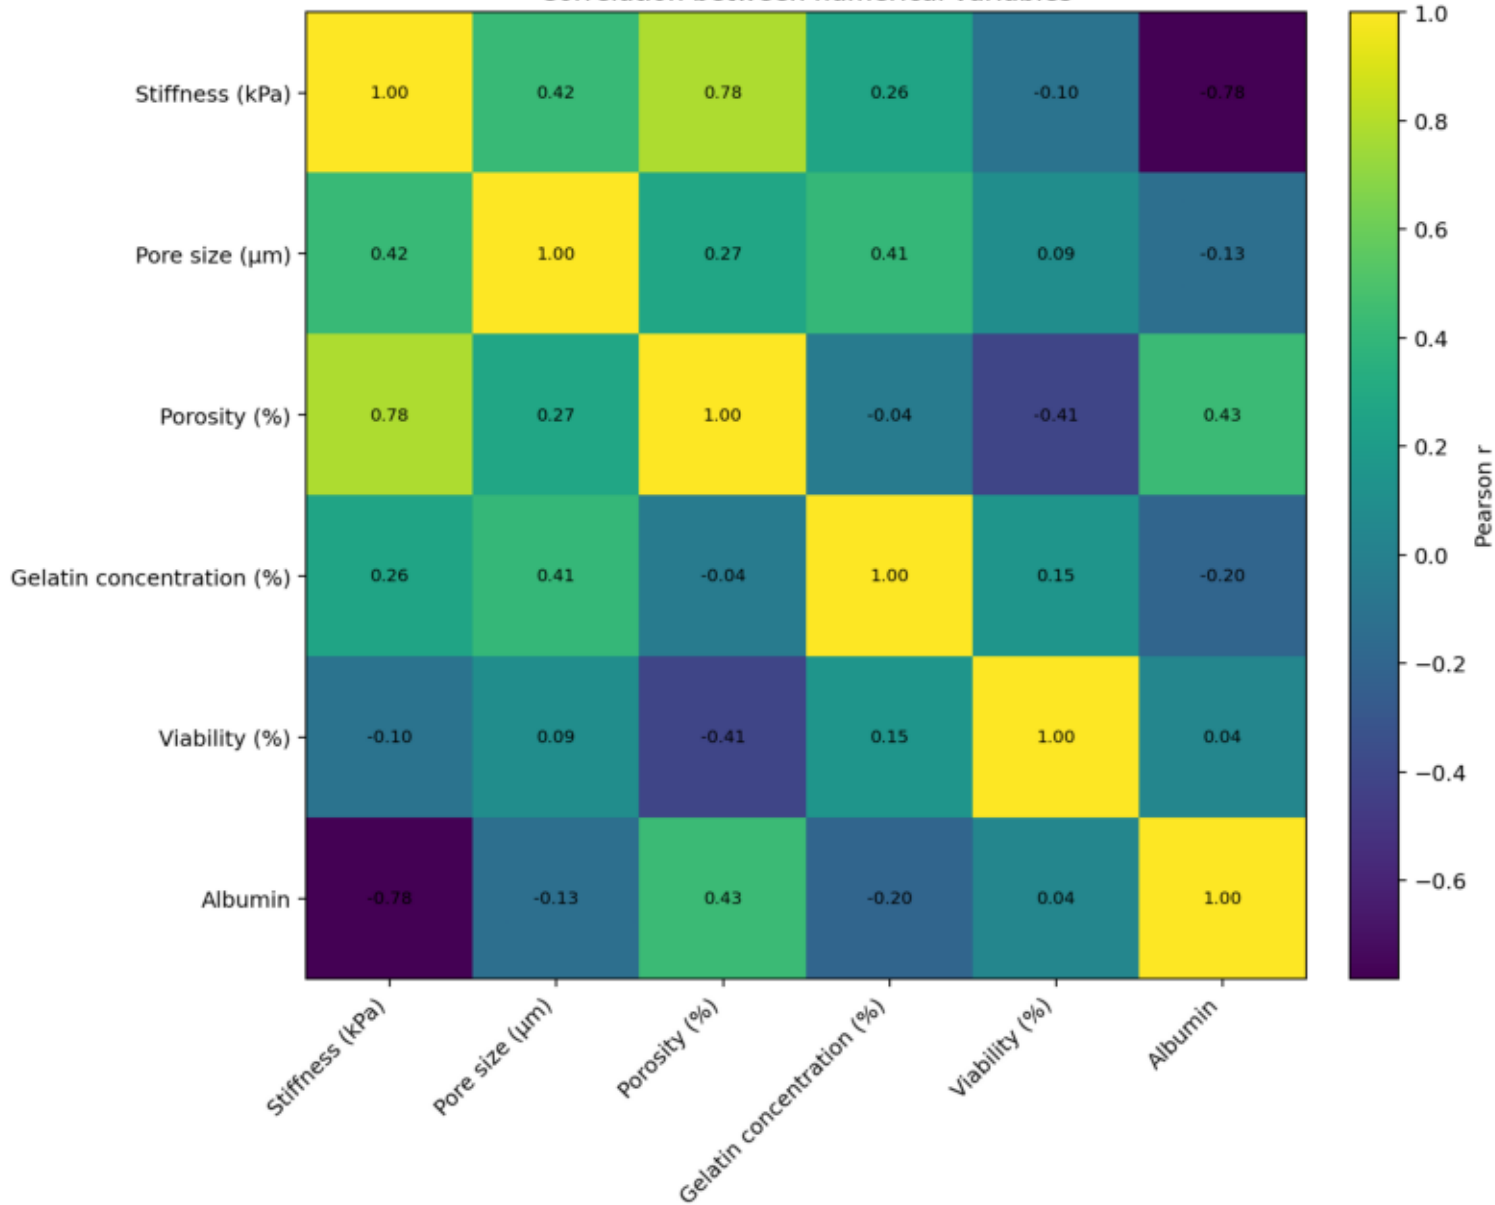

Pore size $\rightarrow$ viability (n=71)

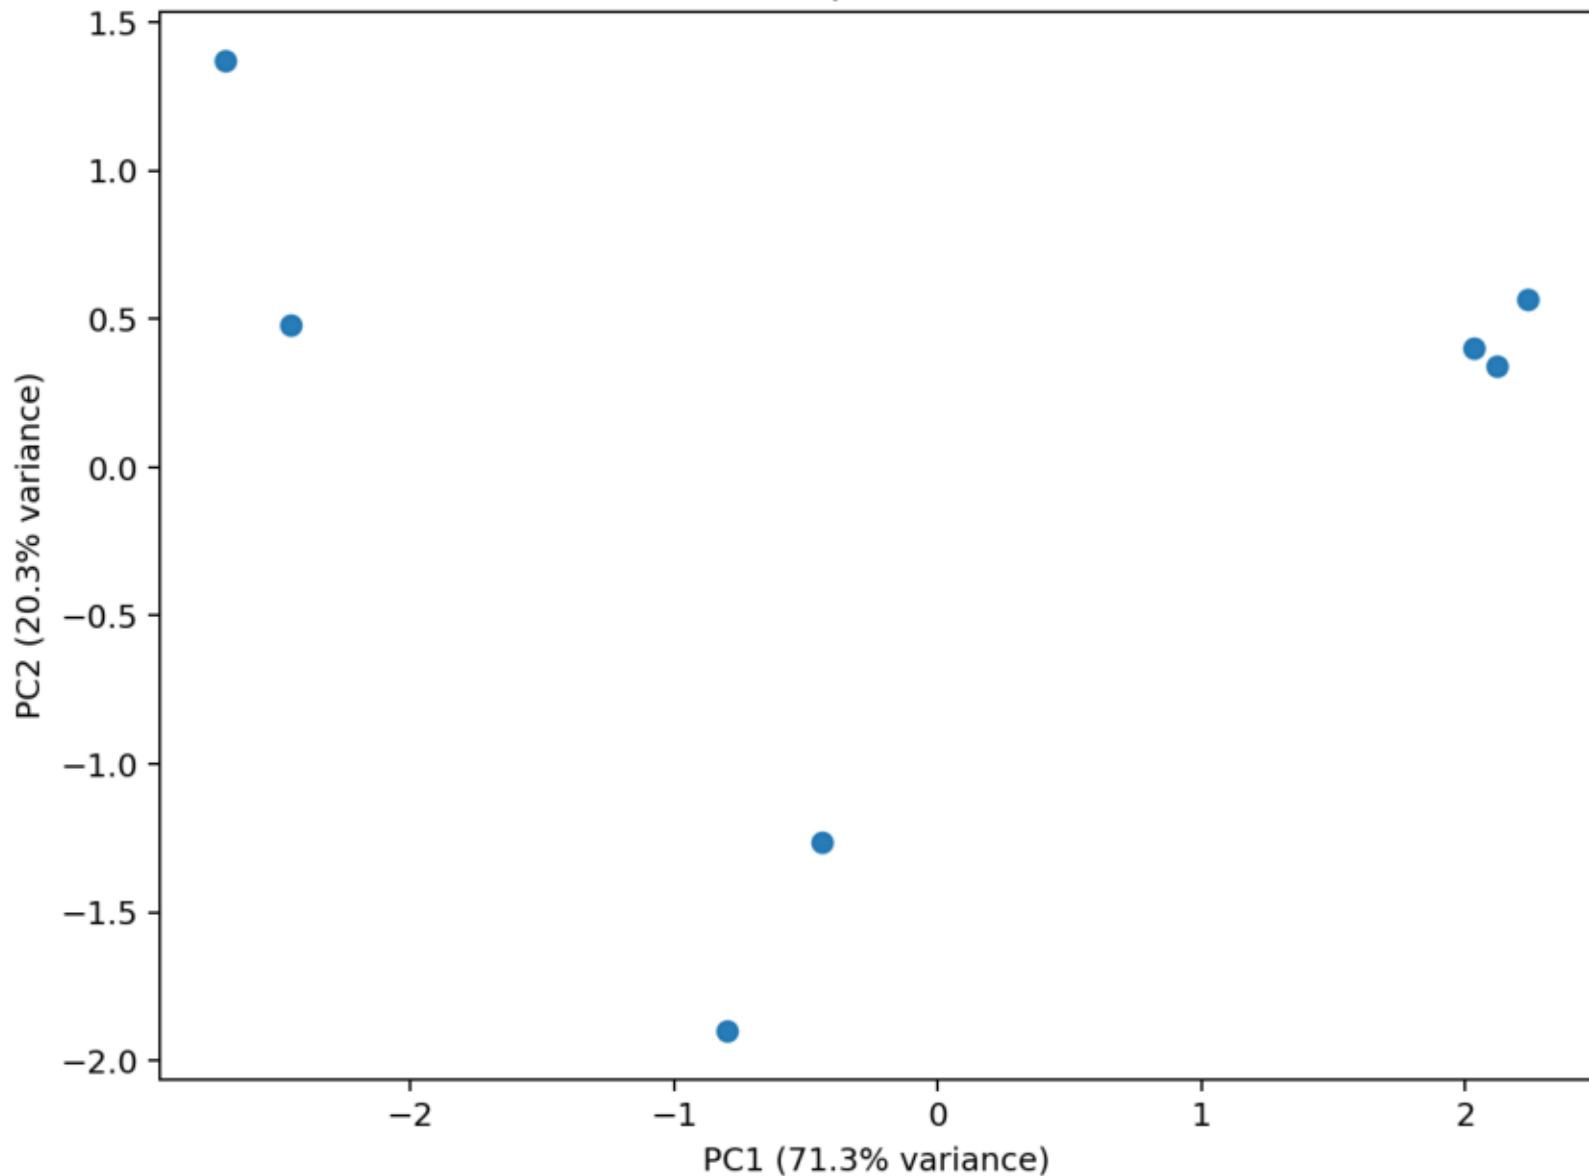

Gelatin concentration $\rightarrow$ viability (n=94)

Correlation between numerical variables

PCA of scaffold/response variables (n=14)

Similar scaffold conditions — K-means clusters (k=2)
